

System for Monitoring Timber Harvesting (Simex)

Mapping logging in RONDÔNIA STATE

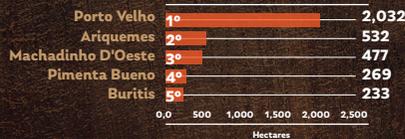

August 2021 to July 2022

Between August 2021 and July 2022, Simex network mapped 18,658 hectares of forestlands submitted to logging in the state of Rondônia. This area is 14% larger than the area mapped in previous year (16,377 hectares). We detected that 81% (15,115 hectares) of the logged area had an authorization for harvesting and 19% (3,543 hectares) were not authorized. Most of the illegal harvesting occurred in private rural properties (80%) and in one Protected Area (16%), the Matinguari National Park.

UNAUTHORIZED LOGGING: 19%
3,543 hectares

ASSESSMENT OF LEGALITY

The data used to verify the legality of logging activities was obtained from a database of logging authorizations of Sinaflor (National System for Controlling the Origin of Forestry Products), the GeoServer SisCom (Shared Environmental Information System) and data from the Sustainable Forest Management Plans and Forest Logging Authorizations (Autex) made available by the State Secretariat for Environmental Development - SEDAM/RO. We checked whether each mapped logged area had an operating license and whether it was valid for that period.
